

# LOWRIDER

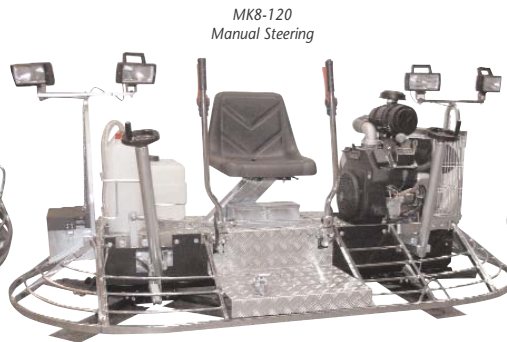

POWER TROWEL

SOLUTIONS THAT LAST

**LOWRIDER POWER TROWELS**

With 3 sizes, 6 distinctly different models and manual or hydraulic steering, MBW **LOWRIDERS** cover the full range of floating and finishing applications. **LOWRIDERS** have been in production for over 25 years and played an important role in the pioneering and development of riding trowels. Decades of experience has resulted in the industry's lowest maintenance line of high performance ride-on trowels. **LOWRIDERS** are simple machines with far fewer moving parts, the industry's most reliable drive train, the highest quality components and materials. **LOWRIDERS** set industry standards for high performance, low maintenance and long life.

**MK8-75** is the industry's smallest ride-on trowel. Perfect for large or small jobs, multi-story flooring and as a compliment to large machines that just can't operate in tight areas. This 468 lb. rider transports in the bed of a pick-up, passes through a 32" doorway, can be used as an edging trowel. Floats and finishes with equal proficiency.

**MK8-90** is a manual steer, 20 hp, 6 foot machine. Excellent for float or finish applications with a low center of gravity for improved operating stability. A clean, easy to service design. A workhorse on typical applications.

**MK8-91** is the industry's only hydraulic steer, 25 hp, 6 foot machine. Same basic design as MK8-90, but hydraulic steering reduces operator fatigue on long duration applications.

**MK8-120** is a manual steer, 31 hp, 8 foot machine. Our most popular North American model. Low center of gravity, superior lines of sight, protected drive train and easy to service. Another workhorse in floating or finishing applications.

**MK8-121** is the hydraulic steer version of the MK8-120 with choice of a gas or diesel engine. Low center of gravity, ease of operation and service. A low maintenance, long lived product.
