

Combi 350/1200 iPower

When you begin to use the Combi 350/1200 you will notice some little bumps as you pull the blade through the material – this is normal and is not a problem. During the ocean transport from Italy the rollers develop a little flat spot. These flat spots go away as you use your saw – no adjustments will be required.

Spray the travel bar with WD-40 and wipe it down nicely once a day. Give your 350/1200 a little love on a daily basis and it will last and last.

Thanks, for your purchase.

Combi 350/1200 iPower

Please be aware that the blade that comes mounted on this saw is a general purpose blade that we supply at no charge. Its quality is o.k. for softer bricks, and pavers. If you are cutting stone or tile you will need a different blade. Should you have any questions about which type of blade will work best with the material you are cutting just give us a ring @800-275-5463.

Thanks so much!
